CLAY LIANG 梁珂玮

MANAGEMENT & DATA SCIENCE | FINANCIAL, RISK & DECISION ANALYTICS

claysps@outlook.com | +86 133 1680 0188 | linkedin.com/in/clayins131 | github.com/Clayins131 | tuixue.nl

PROFILE

Management & Data Science student at TUM with experience in data analytics, management reporting and applied AI at Airbus, Lenovo and Tsinghua University. I enjoy analysis most when it supports a real decision - making risk visible, testing financial assumptions or helping a team act with greater clarity. Interested in banking, risk and quantitative analytics, portfolio analytics and technology consulting.

EDUCATION

Technical University of Munich (TUM) - BSc Management & Data Science **2026 - Present**

TUM School of Management, Heilbronn, Germany | Focus: management, finance, statistics, data analytics and business intelligence

Leiden University - Previous studies in Artificial Intelligence & Data Science **2025 - 2026**

Leiden, Netherlands | Coursework included statistics, data visualisation, databases, machine learning and software engineering

EXPERIENCE

Airbus Tianjin Final Assembly - Data Analytics Intern | Tianjin, China **Jun 2025 - Sep 2025**

- Analysed operational and production data using SQL, Python, Databricks, Apps Script and Excel to identify process bottlenecks, performance deviations and sustainability metrics.
- Built dashboards, charts and presentation materials that translated technical findings into concise updates for cross-functional stakeholders across operations, procurement, quality and engineering.
- Worked with imperfect, multi-source data and improved the reliability of recurring analysis through structured checks, clearer definitions and traceable reporting logic.

Lenovo - Data Science Intern / Intern Project Lead | Tianjin, China **Feb 2025 - Jun 2025**

- Developed Tableau and Power BI dashboards for digital-transformation and supply-chain work, helping teams compare trends, monitor KPIs and communicate performance drivers.
- Standardised recurring Excel and PowerPoint reporting, clarified metric definitions and converted business questions into reusable analytical workflows.
- Coordinated a small intern workstream, tracked milestones and consolidated technical outputs into management-ready presentations.

Tsinghua University - AI Research Assistant | Remote **Jun 2024 - Present**

- Supported audio deep-learning research through dataset preparation, model evaluation, data augmentation, loss-function testing and backend debugging.
- Maintained traceable experiment records and translated results into clear technical documentation and presentation-ready summaries.

SELECTED PROJECTS

Financial Data, Valuation & Scenario Tools | tuixue.nl/fintools **2025 - Present**

- Built and deployed browser-based tools covering live market data, foreign exchange, inflation, DCF valuation, investment returns and scenario testing with adjustable cash-flow, growth and discount-rate assumptions.
- Created an ASML valuation tracker that compares live market price with an independently modelled DCF range to explore how expectations and risk assumptions affect valuation.

Research & Data Tools | Independent **2024 - Present**

- Developed lightweight tools for video annotation, large-file CSV processing and offline recommendation workflows, focusing on usable outputs, runtime efficiency and real user constraints.

SKILLS

Analytics: Excel, Power BI, Tableau, financial modelling fundamentals, scenario analysis, KPI reporting, data visualisation and management presentations

Programming & Data: Python, SQL, Pandas, NumPy, JavaScript, C++, Databricks, Spark, Git, Docker and Linux

Machine Learning: PyTorch, TensorFlow, Scikit-learn, experiment design and model evaluation

Languages: Mandarin Chinese (native), English (fluent; TOEFL iBT 100), German (basic)
